O65 Forecasting human development noting knowledge factor [Text]: monograph.
Zhukovsky: IIM LINK, 2015. – 210 p.p.: fig., tab., graphs.

The author considers laws of human development as a system; the work covers population growth during the demographic transition, knowledge enrichment, features of the sequence of global technology revolutions and their interrelation with knowledge enrichment. The author forecasts the growth of global GDP and dates of next technology revolutions. The revolutions are proved to come in pairs close in essence. The author develops tools for forecasting human development basing on intellectual capital analysis both of individual countries and worldwide.

The book is intended for researchers, economic lecturers and anybody who is interested in issues of human development, knowledge enrichment and forecasting.

Content

Introduction	5
Part 1. Initial analysis of human development	7
Chapter 1. Review of articles on human development	7
1.1 World as a system	7
1.2 Cyclic mode of development	8
1.3 Modeling human development	12
1.4 Population growth	13
1.5 Global GDP dynamics	17
1.6 Role of knowledge factor	19
Chapter 2. Humanity from the systems approach perspective	24
2.1. Humanity analysis from the systems approach perspective	24
2.2. System parameters featuring human development	26
2.3. Dimension and similarity analysis	29
Chapter 3. Demographic model of humanity	31
3.1. Population growth model	31
3.2. Numerical solution	35
3.3. Analytical solution	37
3.4. Analysis of solution parameters	38
3.5. Systems effects	39
Chapter 4. Cyclic mode of human development	42
4.1. Technology revolutions	42
4.2. Waves - indicators	44
4.3. Content of technology revolutions	45
4.4. Profile of technology waves	48
Part 2. Knowledge in human development	52
Chapter 5. Knowledge enrichment	52
5.1. Knowledge turnover cycle	52
5.2. Knowledge enrichment in time	53
5.3. About the reasons why knowledge amount is proportional to population	56
5.4. Interrelation between knowledge amount and publication activity	59
5.5. Interrelation between technology revolutions and knowledge enrichment	64
5.6. Causes of technology revolutions	66
Chapter 6. Start of human development from knowledge perspective	70
6.1. Basic structures and functions of human brain	70
6.2. Language and internal speech	75
6.3. Brain capabilities: from mind to thinking	80
6.4. Paradox of mitochondrial Eva	84
6.5. Chronicles of human development and transition to thinking	86
6.6. Previous technology revolutions	94
Chapter 7. Interrelation between knowledge enrichment and global GDP	96
7.1. Global GDP growth approximation	96
7.2. Forecasting global GDP growth noting knowledge enrichment	97
7.3. GDP and forecasting next revolutions parameters	102
Chapter 8. Knowledge building system	104

8.1.	Number of R&D people in the world	104
8.2.	Knowledge building system	109
8.3.	R&D expenditures	111
8.4.	Publication activity in countries	114
8.5.	Publication activity and language factor	121
Chapter 9.	Next technology revolutions	123
9.1.	Content of the next technology revolution	123
9.2.	Knowledge Revolution?	127
9.3.	Perspectives of knowledge revolution	133
Part 3.	Actualization of knowledge resource via intelligence	143
Chapter 10.	Knowledge enrichment and education	143
10.1.	Current situation in education	143
10.2.	Types of education within education turnover cycle	148
10.3.	Features of R&D specialist training	151
10.4.	Specialist competence	155
10.5.	Modern education technologies	157
Chapter 11.	Interrelation between intelligence and GDP of countries	163
11.1.	Evaluation of intellectual and human capital of countries	163
11.2.	Intellectual capital indicator	169
11.3.	Forecasting GDP of countries basing on VIC model	177
11.4.	Intellectual capital enrichment and technology revolutions	186
Conclusions		188
Summary		190
Supplement 1. Glossary		192
Supplement 2. Legend		193
Supplement 3. Deflator figures		195
References		196
